

Different types of web Hosting

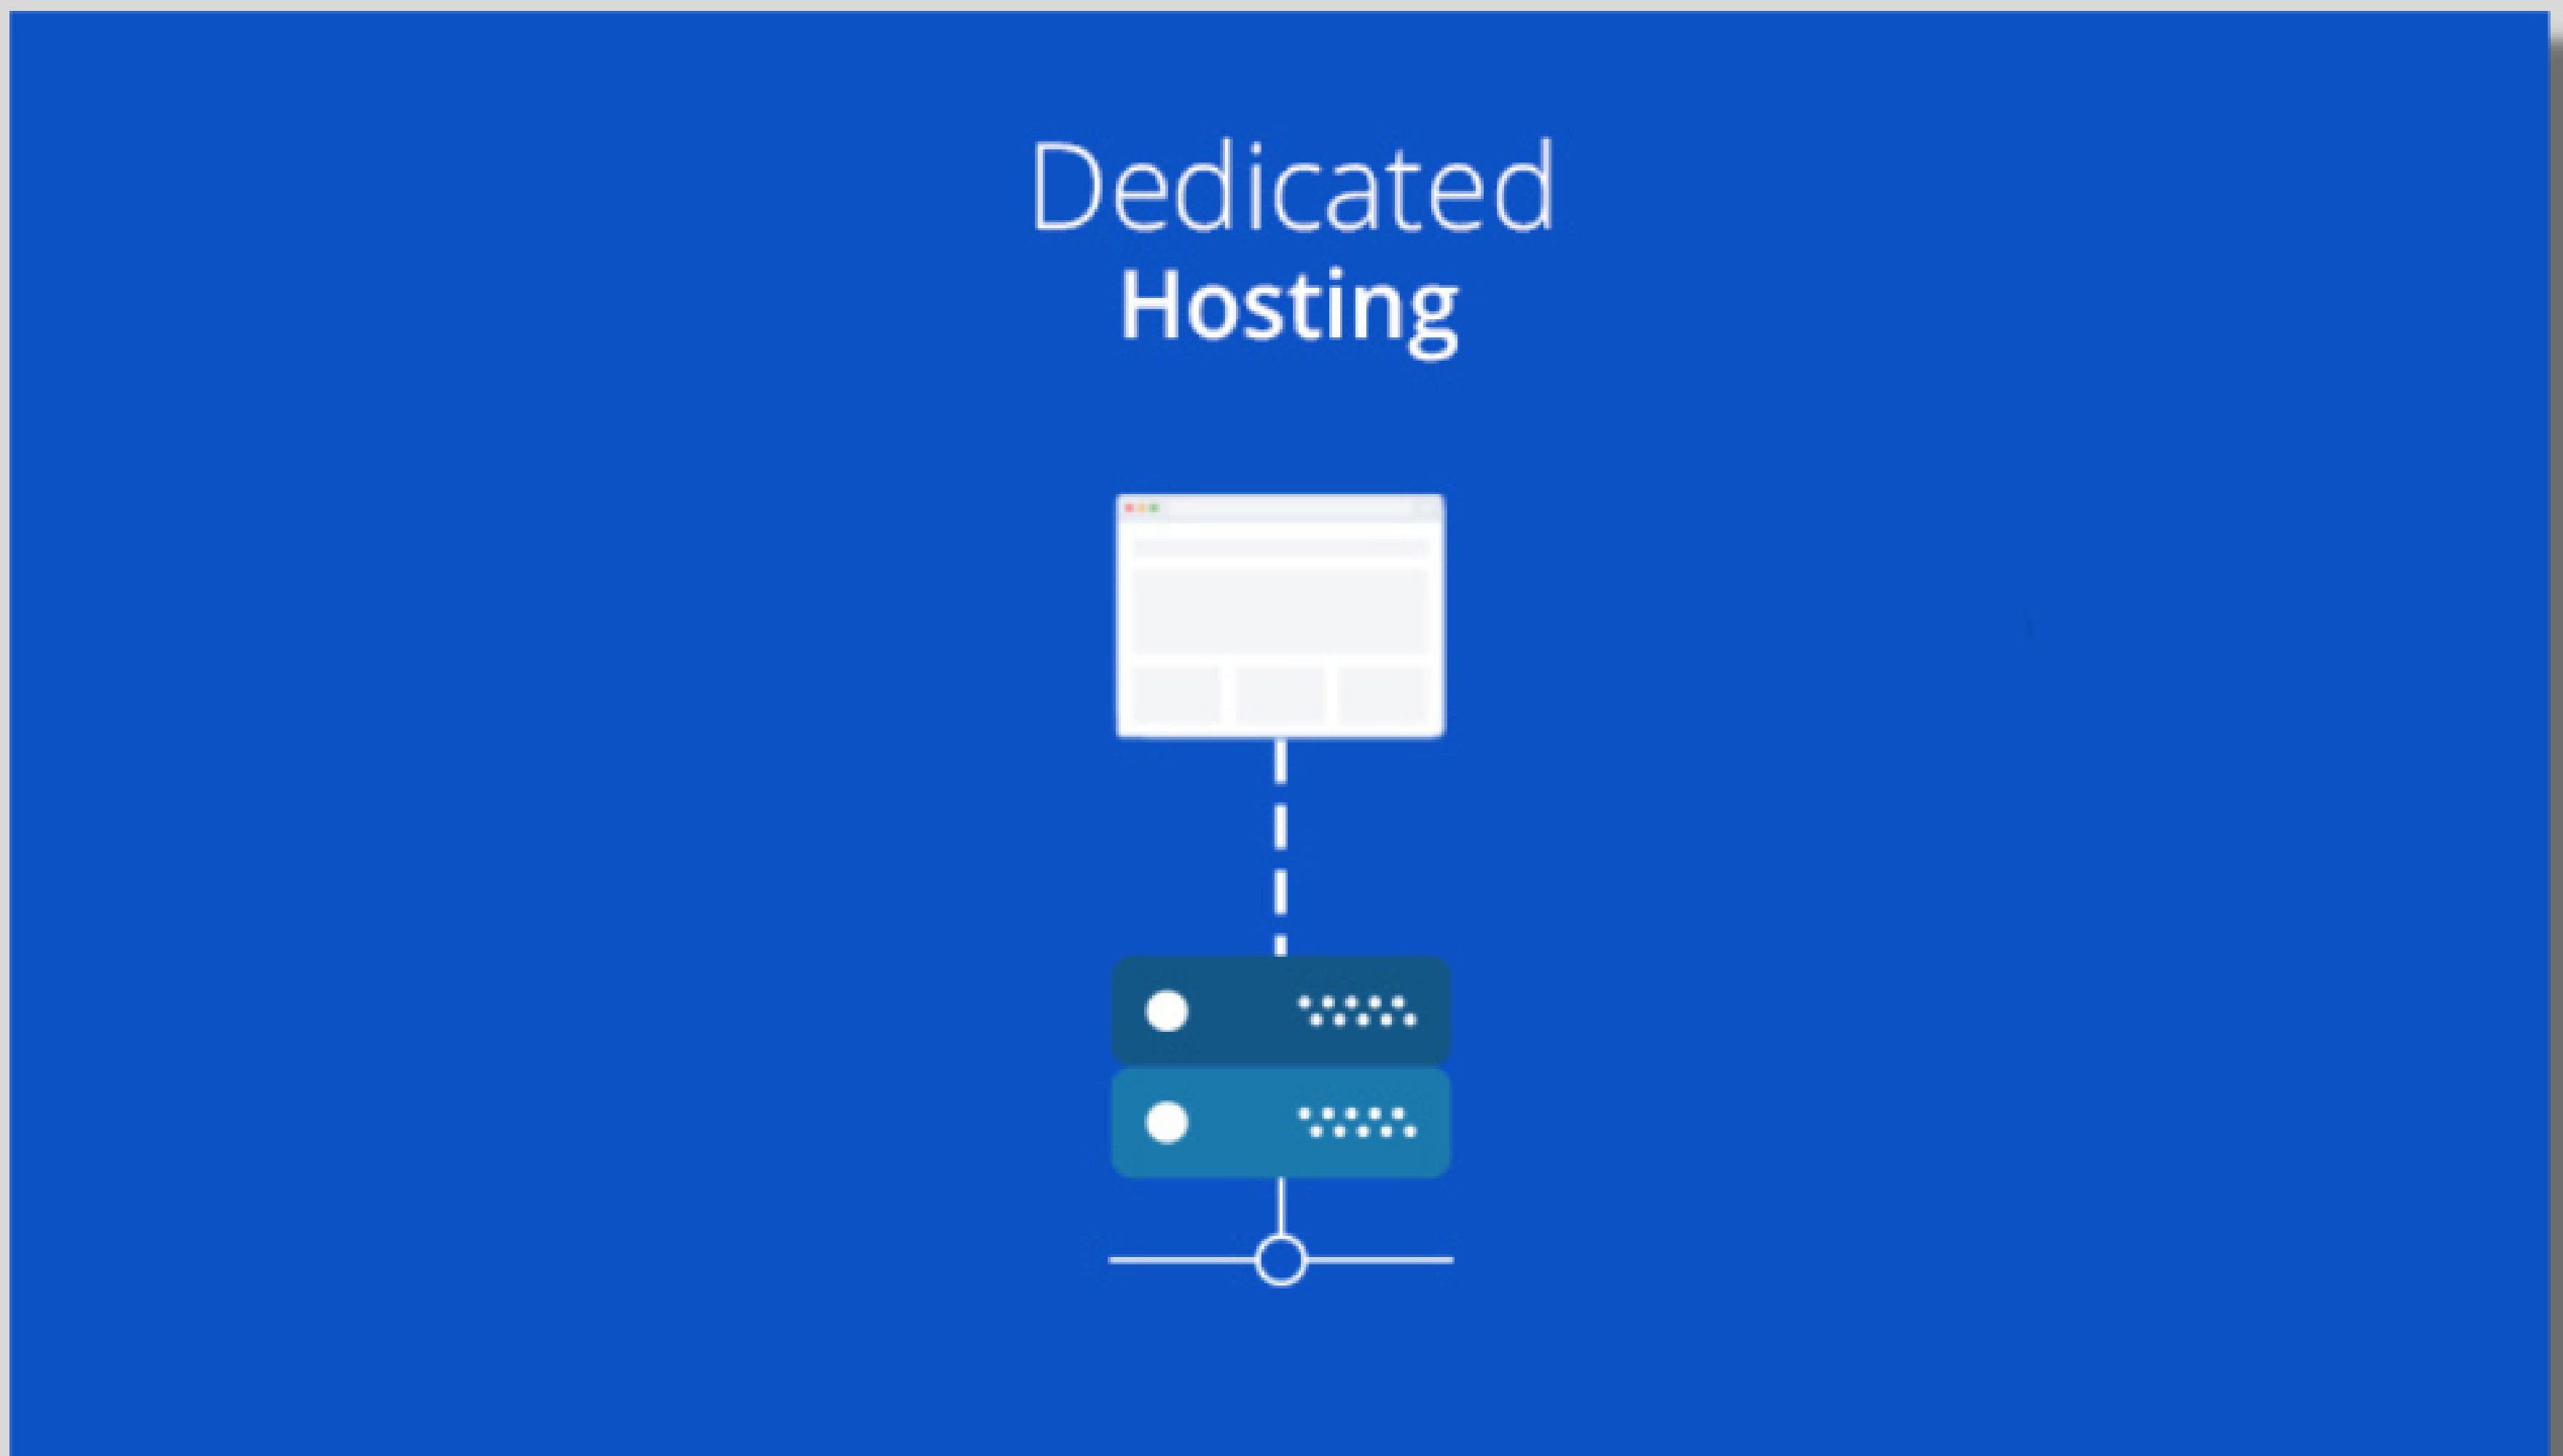

@Akshar Bhalani

1.Shared Hosting

your website is hosted on the same server as many other websites. This means you'll have limited resources available to you, but it's a good option for small or personal websites.

2. Dedicated Hosting

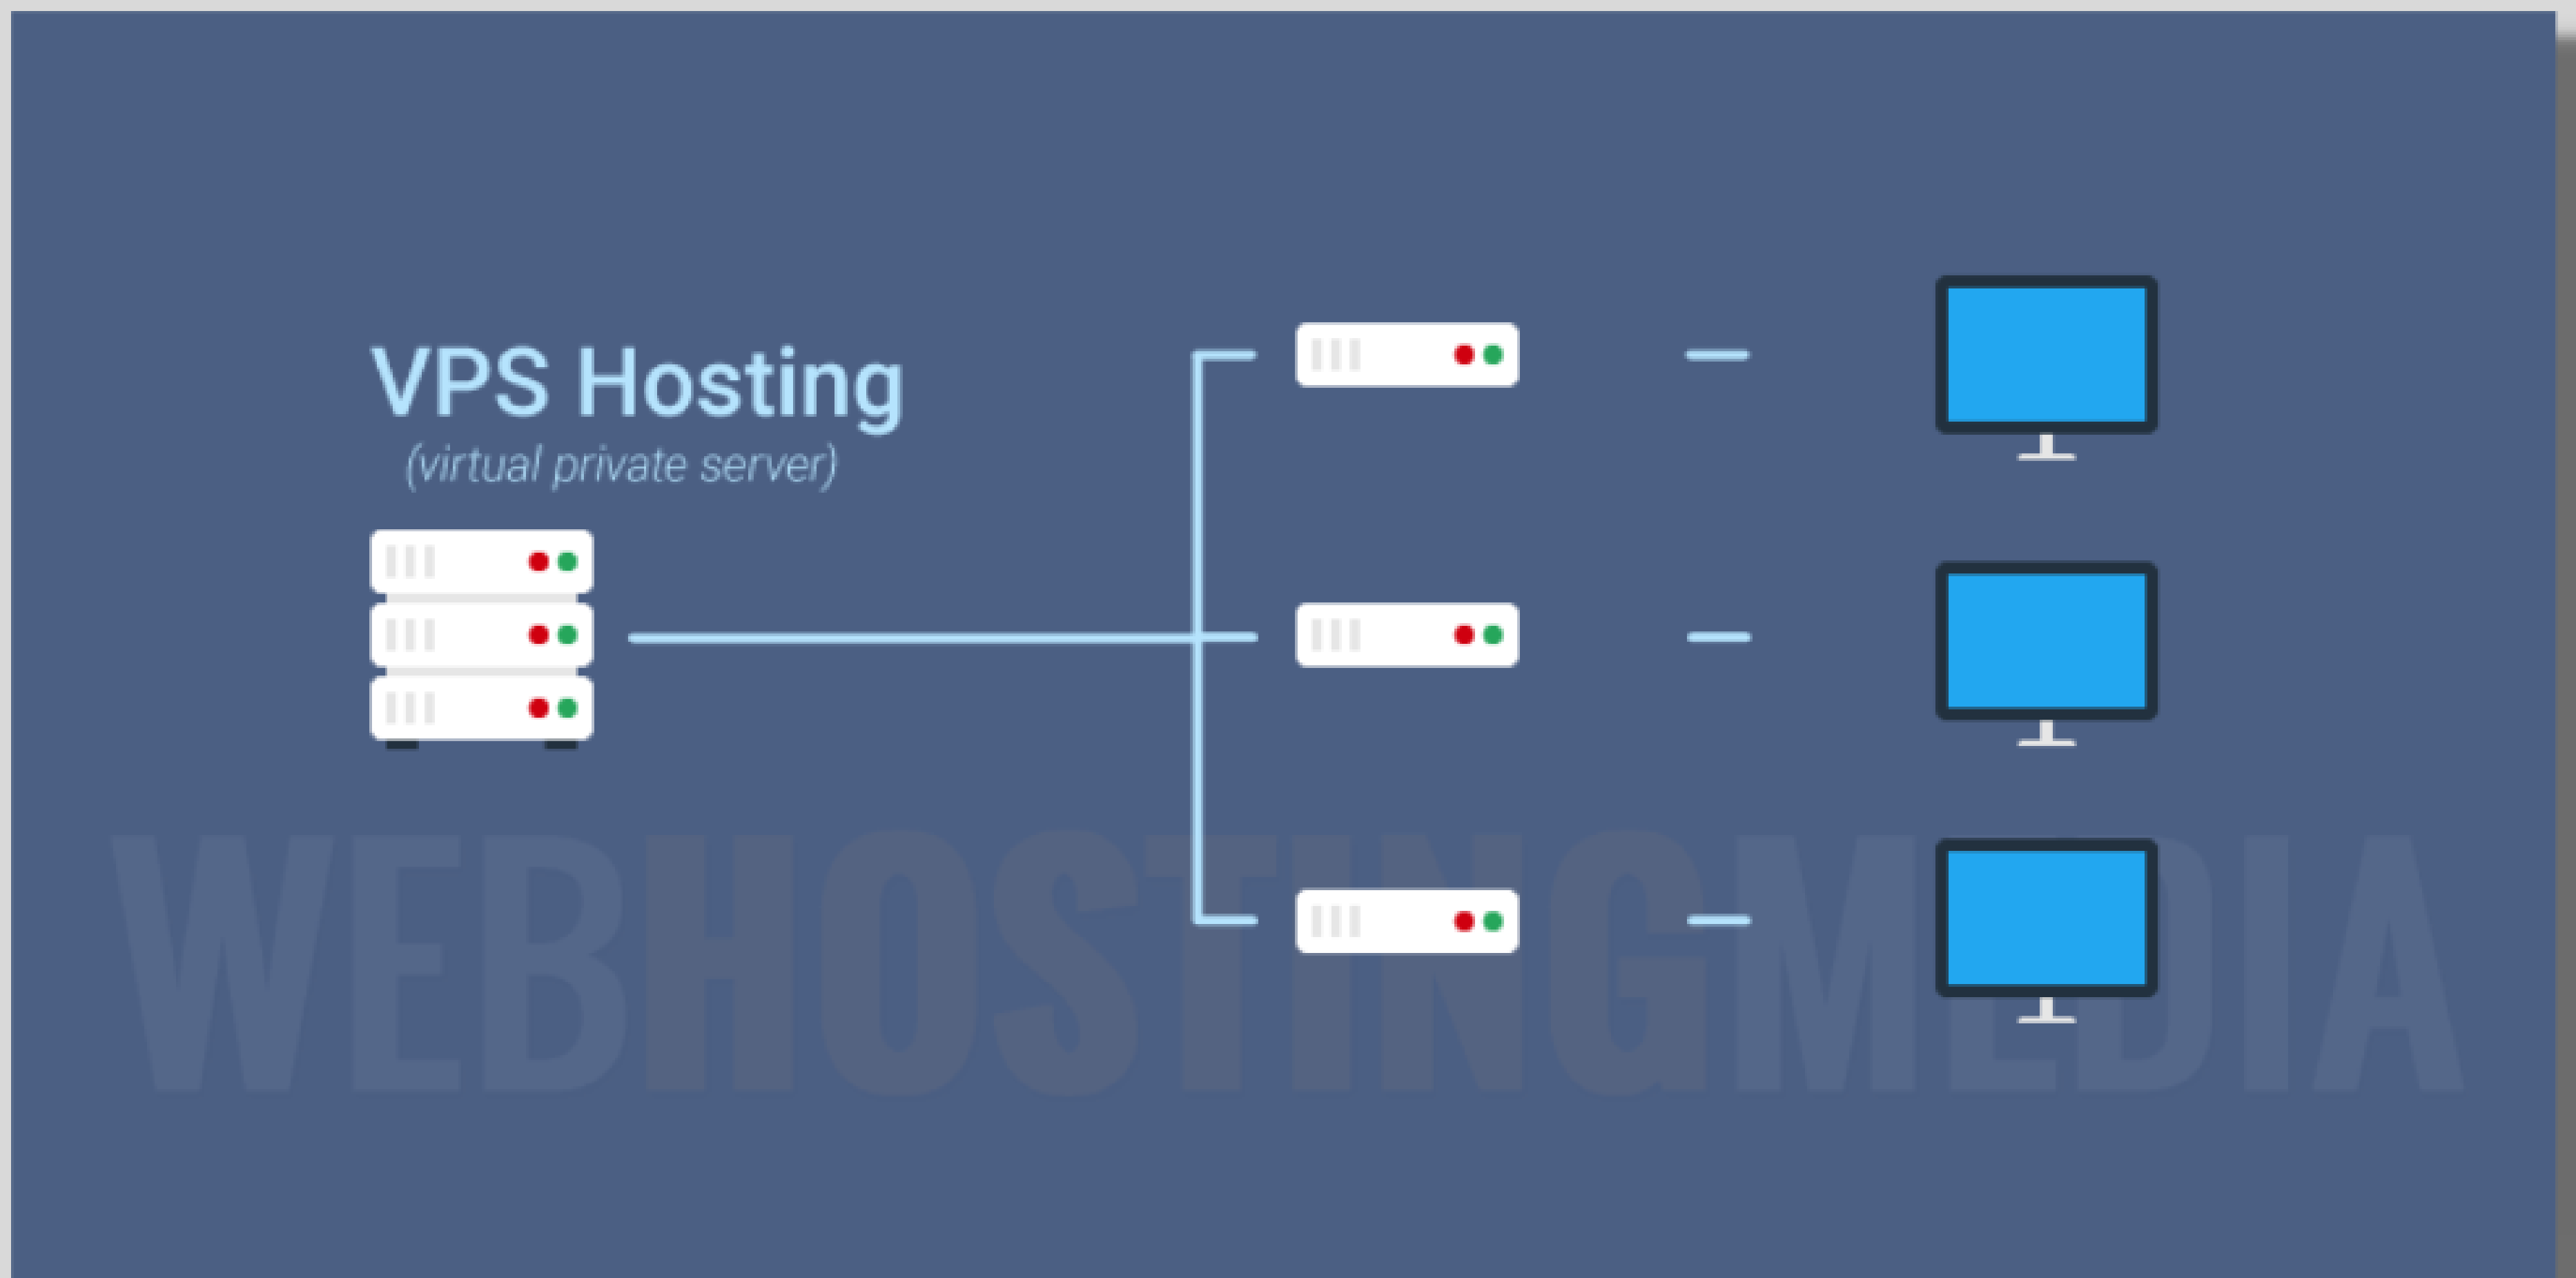

you have your own physical server and are responsible for maintaining it. This is a good option for very large websites that receive a lot of traffic and need the resources of an entire server to themselves.

3.Cloud Hosting

This type of hosting uses a network of servers to host websites, allowing for more flexibility and scalability. It's a good option for websites that experience sudden spikes in traffic.

4.VPS Hosting

you have your own virtual server with dedicated resources. This is a good option for websites that receive a lot of traffic and need more resources than a shared hosting plan can provide.

5. Managed Hosting

This is a type of hosting where the hosting company handles the maintenance and management of the server for you. It's a good option for those who don't want to deal with the technical aspects of server management.

Thank You
